FREE GUIDE

Motion design with Claude Code

Make the same video as mine, in 5 steps.

5 steps

2 prompts to copy & paste

No editing software

BEFORE YOU START

What you need

No coding skills needed: you describe it, Claude writes the code.

Claude Code

Claude's AI that writes the code for you.
You need a paid Claude plan (Pro or Max).

VS Code or a terminal

I use VS Code. The terminal works just as well.

Google Chrome

To play your animation full screen.

Your brand

Your logo as a PNG, your colors (# codes) and your fonts. That's what makes the video yours.

No brand guidelines? Ask Claude: "Suggest a dark, modern brand style for [your business]."

STEP 1 / 5

Install Claude Code

Two ways to do it. Pick the one you like.

Option 1 • In VS Code WHAT I USE

- 1 Install VS Code (free):
code.visualstudio.com
- 2 Press **Ctrl + Shift + X** (Cmd + Shift + X on Mac), search for **Claude Code** and click **Install**.
- 3 Create a folder called **my-video** with your logo in it. In VS Code: **File** → **Open Folder**.
- 4 Click the Claude * icon and sign in. You're ready.

Option 2 • In a terminal

- 1 Copy the install command for your computer.
- 2 Go to your folder with **cd my-video**.
- 3 Type **claude**. The first time, it opens your browser so you can sign in.

```
# Mac / Linux
curl -fsSL https://claude.ai/install.sh | bash

# Windows (PowerShell)
irm https://claude.ai/install.ps1 | iex

# Then, in your folder
cd my-video
claude
```

STEP 2 / 5

Paste Prompt 1

Replace everything in [brackets], then paste it into Claude Code. Don't send it yet.

Prompt 1 • Your video

COPY & PASTE

Create a 45-second 3D motion design animation to show [what your product or service does] to [your audience].

MY BRAND

- Colors: [main color #.....], [secondary color #.....], very dark background.
- Fonts: [heading font] for headings, [body font] for body text.
- Logo: the file [logo.png] in this folder.

THE SCENES (about 5 seconds each, adapt them to my business)

1. A request comes in (email, message or form).
 2. The AI reads it and highlights the key info, which flies out as small chips.
 3. The chips land in a record that fills itself in.
 4. A document creates itself (quote, order, report...).
 5. It flies to the customer's phone, and they approve it in one tap.
 6. Everything else follows on its own: schedule, invoice, reminder.
 7. Big moment: the dashboard explodes in 3D.
 8. End: my logo in the center, my name, then "[your closing line]".
- One subtitle of 8 words max per scene.

THE STYLE

- Realistic interfaces floating in space like dark glass panels, with a glow in my main color, floating particles and a grid floor fading into the distance.
- A cinematic camera: it glides from scene to scene, moves closer, turns slightly, with a subtle handheld feel.
- Every element appears with a small bounce. Nothing moves randomly.
- Subtitles at the bottom of the screen, my logo and name at the top left, a start screen with a "Play" button.
- Subtle sound effects (pop, whoosh, chime).

STEP 3 / 5

Add Prompt 2

Paste it right below Prompt 1, in the same message, and send. Claude works for a few minutes and creates your file.

Prompt 2 • Technical instructions

COPY & PASTE

Technical instructions:

- One self-contained HTML file named motion.html: fonts and logo embedded in base64, no external libraries.
- A fixed 1920 × 1080 px stage (or 1080 × 1920 for a vertical video), scaled to fill the window.
- 3D in CSS: a container with perspective, a "world" with preserve-3d, each object placed with translate3d and rotations. The camera is a transform of the world, interpolated between keyframes with a smooth curve (Catmull-Rom), plus a slight sway.
- Everything is computed by a render(t) function, where t is the time in seconds. No automatic CSS animations: I must be able to jump to any moment.
- Easing functions (ease-out, ease-in-out, small bounce) for every entrance.
- One table for the subtitles (start, end, text) and one for the camera keyframes.
- Sound effects synthesized with the Web Audio API (pop = fast rising sine, whoosh = filtered noise, chime = soft notes), triggered at the right moments.
- Keyboard controls: Space pause, R restart, arrows previous/next scene, S sound, C subtitles, H logo, L loop, F fullscreen.
- A capture mode: if the URL contains ?capture&t=12, show the frame at 12 s directly.
- Important: never put opacity < 1, filter, overflow: hidden or will-change on a container that has 3D children (otherwise Chrome flattens the 3D).
- When you're done, if you can, take screenshots at several moments and check that no text overlaps.

Claude asks for permission to create the file? Say yes, that's normal.

STEP 4 / 5

Fix it in a few rounds

The first version is never perfect. Watch it, spot what's off, and just tell Claude.

At 12 s, the texts overlap: space them out.

The camera moves too fast on the quote, slow it down.

Bring the camera closer to the phone.

Make the subtitles bigger, people watch on their phones.

* Fixed. Reload the page to see it.

💡 To see an exact second, add **?capture&t=12** to the end of the address in Chrome.

💡 The 3D suddenly goes flat? Tell it: "the 3D got flattened, find out why and fix it."

STEP 5 / 5

Play your video

Double-click **motion.html**: it opens in Chrome.

F

Full screen

Space

Pause / play

R

Restart

← →

Previous / next scene

S

Mute sound

C

Hide subtitles

→ Then record your screen however you like, and post it.

WHAT ABOUT YOUR BUSINESS?

What you see in the video, I build for real.

Apps and custom business tools that do the repetitive work for you: requests, customer records, quotes, reminders, scheduling.
